

WHO ARE WE?

Phoenix Integrated Health is a multifaceted behavioral health approach. We fill in the gaps of traditional services that were historically separate and apart, causing disruptions in clinical care for individuals seeking help for treatment of Mental Health, Addictions and/or General Health.

Our focus is not only on helping our clients maintain and strengthen their recovery, but also to become productive members of a community.

Our graduates will leave Phoenix with a strong foundation in the outside recovery community and a solid understanding of the skills that are necessary to live a productive life in recovery.

OUR MISSION

Closing the gaps in service delivery of substance abuse treatment to improve long term recovery through integrated care and coordination with the community.

Our Values
through innovation, integrity, and community, we are applying evidence-based treatment and trauma care, individually and through community at every level. For us these values are indispensable and always evolving.

PHOENIX INTEGRATED HEALTH

Patients in recovery face many unique and challenging circumstances, in order to better address the needs of this population, Phoenix provides patient care based on individual client needs. Peer Supporters with lived experience help balance the competing areas of work, parenting, and recovery. Phoenix partners with Community Services and the Courts to provide patient support and resources.
